Features

- The opening, closing and direction of flow controlled by solenoid
- Position monitoring by high voltage proximity switch
- Short response time, high induction frequency, good repeatability
- Accurately detect the spool switching position
- Non-contact induction to avoid wear and increase the service life

The valve spool is moved from the rest position to the required working position to realize the switching process by energizing or de-energizing solenoid. The fluid flows from P to A and B to T, or from P to B and A to T.

Technical parameters

Working pressure	Port A, B, P	to 35
	Port T	to 16 (AC), to 21 (DC)
Medium	Mineral hydraulic oil or phosphate hydraulic oil	
Viscosity range	mm ² /s	2.5 to 500
Temperature range	°C	-30 to +80

Note: When the working pressure exceeds the allowable pressure, port T must be used as drain port for symbols A and B.

Note: For characteristic curves and limits, see the catalogue of WE solenoid directional valve.
