

Explosion-proof Electro-hydraulic Directional Valve

Model: G-WEH...4X/6X/7X

- ◆ Size 10~32
- ◆ Maximum working pressure 350 bar
- ◆ Maximum working flow 1100 L/min

Contents

Function description, sectional drawing	02-03
Models and specifications	04
Functional symbols	05-07
Technical Parameters	08-09
Characteristic curve	10-14
Characteristic limit	10-14
Switching time adjustment, pressure reducing valve and pre-load valve	15
Component size	16-24

Features

- Mainly used to control the opening closing and flow direction of liquid flow
- Subplate mounting
The mounting surface according to DIN24340 form A and ISO4401
- Spring or hydraulic centered
Spring or hydraulic return to initial position
- Explosion-proof solenoid
- Optional switching time adjustment
- Optional pre-load valve in port P of the main valve

Function description, sectional drawing

The G-WEH directional valve is a directional spool valve with explosion-proof electro-hydraulic operation. It is used to control the opening, closing and direction of the liquid flow.

The valve mainly consists of valve body (1), control spool (2), main valve with one or two reset springs (3.1) and (3.2), pilot valve (4) with one or two explosion-proof solenoids "a" (5.1) and "b" (5.2).

The main control spool is held in the neutral or initial position by springs or pressure. For the valve with spring-centered, the two spring chambers (6) and (8) are connected to the oil tank through the pilot valve in the initial position. The pilot valve (4) is supplied with oil through the control line (7). The control oil can be supplied internally or externally (externally via port X).

The main control spool (2) is hydraulically operated by the pilot valve (4). Due to the operating of the pilot valve on one end of the main control spool, the spool moves to the operation position, then the valve opens in the operation direction and the fluid flows from P to A and B to T or P to B and A to T. The control oil can be drained internally or externally.

4/3-way directional valve with hydraulic centered of main valve, model WEH..H/

In this structure, pressure oil acts on both end surfaces of the main control spool (2). The centering sleeve (10) locates the main control spool (2) and keeps it in the middle position.

If one end of the main spool (2) is unloaded, the main spool (2) moves to the working position under the pressure from the other end, thereby changing the direction of the oil flow. The unloaded control spool face displaces the returning pilot oil into port Y externally through the pilot valve (4). The oil is drained internal from port L to the tank directly.

Function description, sectional drawing

Pilot oil supply

1. Model G-WEH10

(1) Conversion between internal supply and external supply:

The channel P on the top of the main valve body with M6 screw (3) is external supply, and is internal supply when M6 screw (3) dismantled.

(2) Conversion between internal drain and external drain:

Removing the plug (1) and installing M6 screw (2) is external drain, dismantling the M6 screw (2) is internal drain.

2. Model G-WEH16

(1) Conversion between internal supply and external supply:

The channel P on the bottom of the main valve with M6 screw (8) is external supply, and is internal supply when M6 screw (8) dismantled.

(2) Conversion between internal drain and external drain:

The channel T on the top of the main valve with M6 screw (7) is external drain, and is internal drain when M6 screw (7) dismantled.

3. Model G-WEH25

(1) Conversion between internal supply and external supply:

The channel P on the top of the main valve with M6 screw (9) is external supply, and is internal supply when M6 screw (9) dismantled.

(2) Conversion between internal drain and external drain:

The channel T on the top of the main valve with M6 screw (10) is external drain, and is internal drain when M6 screw (10) dismantled.

4. Model G-WEH32

(1) Conversion between internal supply and external supply:

The channel P on the top of the main valve with M6 screw (11) is external supply, and is internal supply when M6 screw (11) dismantled.

(2) Conversion between internal drain and external drain:

The channel T on the top of the main valve with M6 screw (12) is external drain and is internal drain when M6 screw (12) dismantled.

Allowable flow of 2-position and 3-position valves (L/min)			
Spool	Working pressure(MPa)		
	20	25	31.5
E, J, L, M, Q, R, U, V, W C, D, K, Z, Y	160		
H	160	150	120
G, T	160	160	140
F, P	160	140	120

Notice:

The given characteristic limits are suitable for the use of flow in both directions (e. g. from P to A and return from B to T at the same time).

Due to the power of the fluid in the valve, the characteristic limit allowed for only one flow direction might be significantly reduced (e.g. from P to A, while B is closed)!

The characteristic limits are measured when the solenoid is at the operating temperature, at 10% below the standard voltage and without tank preloading.

Characteristic curve

Model G-4WEH16...(Measured at $\vartheta_{oil}=41\text{mm}^2/\text{s}$ and $t=50^\circ\text{C}$)

K	300	250	240	230	210
Z	300	260	190	180	160
Main valve hydraulic return					
HC, HD, HK	300	300	300	300	300
HZ, HY	300	300	300	300	300

- 1) The given flow value can be achieved when the minimum pilot pressure of 1.2MPa exists.
- 2) The given flow value is limiting the value at which the reset spring can return the valve when the pilot pressure decreases.

Allowable flow of 3-position valve (L/min)					
Spool	Working pressure(MPa)				
	7	14	21	28	35
Main valve spring return ¹⁾					
E, H, J, L, MQ, U, W, R	300	300	300	300	300
F, P	300	250	180	170	150
G, T	300	300	240	210	190
S	300	300	300	250	220
V	300	250	210	200	180
Pressure centered (minimum pilot pressure 1.6MPa)					Spool approx. to 160L/min
All spools	300	300	300	300	

Notice:

When using a 4/3-way valve with pressure centered in the main spool which exceeds the given performance limits, a higher pilot pressure is required. Therefore, if the pressure is 35MPa and the flow is 300L/min in the circuit, the pilot pressure of 1.6MPa is required.

The maximum flow of the valve only depends on the acceptable pressure drop through the valve.

When internal supply, a back pressure valve is required because of negative cover of spools Z, HZ, V and the flow less than 180L/min. It is also required due to negative cover of spools F, G, M, P and T.

1) The specified flow value is the limited value at which the reset spring can return the spool back to the end position when the pilot pressure disappears.

1) The given flow value can be achieved when the minimum pilot pressure of 1.3MPa exists.

2) The given flow value is limiting the value at which the reset spring can return the valve when the pilot pressure decreases.

Characteristic curve

Model G-4WEH32... (Measured at $\dot{v}_{oil}=41\text{mm}^3/\text{s}$ and $t=50^\circ\text{C}$)

- 1) Only for spool R
- 2) Not for spool R

Characteristic limit

Model G-4WEH32... (Measured at $\dot{v}_{oil}=41\text{mm}^3/\text{s}$ and $t=50^\circ\text{C}$)

Allowable flow of 2-position valve (L/min)						with pre-load valve and X port internal supply

Pressure centered (minimum pilot pressure 0.85MPa)						
All spools	1100	1040	860	750	680	

Notice:
When using a 4/3-way valve with pressure centered in

- 1) The given flow value can be achieved when the minimum pilot pressure of 1.0MPa exists.
- 2) The given flow value is limiting the value at which the reset spring can return the valve when the pilot pressure decreases.

Notice:

When using a 4/3-way valve with pressure centered in the main spool which exceeds the given performance limits, a higher pilot pressure is required. Therefore, if the pressure is 35MPa and the flow is 300L/min in the circuit, the pilot pressure of 1.5MPa is required. The maximum flow of the valve only depends on the acceptable pressure drop through the valve.

Operating time, pressure valves and pilot valves

Switching time adjustment

To control the switching time of the main valve (1), a double throttle check valve (12) is installed between the pilot valve and the main valve.

Conversion from meter-in control (13) to meter-out control (14):

Remove the pilot valve (4) but retain the O-ring support plate (15), turn the throttle check valve around its longitudinal axis and reassemble it on the mounting surface, install the pilot valve (4). Tightening torque $M_A=9\text{Nm}$ for fixing screw (16).

Model G-4WEH.../.../S or S2

Pressure reducing valve "D3"

The pressure reducing valve (17) must be used if the pilot pressure exceeds 25MPa. The secondary pressure should be maintained at 4.5MPa. When using the pressure reducing valve D3, it must install a plug-in throttle B10 in port P of the pilot valve.

Tightening torque $M_A=9\text{Nm}$ for fixing screw (16).

Model G-4WEH.../.../D3

Pre-load valve (not for size 10)

In the valve with pressureless bypass and internal pilot oil supply, a pre-load valve (18) is installed in port P of the main valve to build up the minimum pilot pressure.

The differential pressure of the pre-load valve must be added to the differential pressure of the main valve to determine the actual value (see characteristic curve). The cracking pressure of the valve is 0.45MPa.
