Features

- proportional directional valve with direct operated proportional solenoid
- For subplate mounting
- Control the direction and flow
- Spring centred control spool
- Internal amplifier, current input A1 or F1, optional
- Operated by proportional solenoids with thread and detachable coil
- Both valves and proportional amplifiers from the same supplier

Function description, sectional drawing

The 4WRE(E) valve is a 4/2-way and 4/3-way proportional directional valve with direct operated and subplate mounting. It is actuated by proportional solenoids with central thread and detachable coil. The control of the solenoids can be achieved through an external amplifier (4WRE) or internal amplifier (4WREE).

Structure:

The valves consist of:

- Valve body with mounting surface (1)
- Control spool (2) with compression springs (3 and 4) and spring seats (X1 and X2)
- Solenoids (5 and 6) with central thread
- Position sensor (7)
- Optional amplifier (8)
- Mechanical zero adjustment (9) accessible by Pg13.5, electrical zero point adjustment (10) accessible by Pg7 for model 4WREE

Operating principle:

- When the solenoids (5 and 6) are de-energized, the compression springs (3 and 4) hold the control spool (2) in the central position between spring seats (X1 and X2)
- After the proportional solenoid is energized, it will directly push the control spool (2), e.g. energization of solenoid "b" (6):
→The control spool (2) is pushed to the left in proportion to the electrical input signal
→At this time, P to A and B to T are connected through the throttle formed by the spool and the valve body with progressive flow characteristics
- De-energization of solenoid (6)
→The control spool (2) is pushed back to the center position by the compression spring (3) In the de-energized condition, the spool (2) is held in the mechanical central position via the reset springs. There is no related to the hydraulic central position for the spool symbol "V". When the valve control loop is closed, the spool is in the hydraulic central position.

Model 4WRE6...2XJ

Function description, sectional drawing

Two Position Valves:

(Mode I4WRE...A...)

In principle, the function of this valve is similar to the valve with three-position, but it is installed with solenoid "a" only. A plug 8.1 is installed instead of the proportional solenoid "b".

Note for model 4WRE6...-2XJ/...:

It must be avoided to drain all the oil in the return line. If necessary, a back pressure valve is to be installed in the circuit (back pressure about 2 bar).

Electrical connections

Model 4WRE...2X/...(Without built-in amplifier)

Component plug connection form

The plug-in connector to DIN175301-803 or ISO4400

Component plug connection form

Inductive position sensor

Plug connector 4-pin Pg7-G4W1F

Connecting cable:

Recommendation:

Cable length up to 50m, model LiYCY 4x0.25mm²

The connection of screen to PE on the supply side only.

Model 4WREE...2XJ/...(With built-in amplifier)

The plug-in connector to DINEN 175201-804

Electrical connections

Model 4WREE...(With built-in amplifier)

Plug allocation

Terminal identification	Contact	A1 signal	F1 signal
Supply voltage	A	24VDC (u (t) =19,4 to 35V), I _{max} =2A	
	B	0V	
Reference potential (actual value)	C	Reference contact F, R _e >50K Ω	Reference contact F, R _e >10K Ω
Differential amplifier input	D	±10V, R _e >50K Ω	4 to 20mA, R _e >100Ω
	E	Reference potential command value	
Measurement output (actual value)	F	Actual value ± 10V (limit load 5mA)	Actual value 4 to 20mA (maximum load resistance 300 Ω)
	PE	Connected with the valve body and cooling element	

Command value:

A positive command value 0 to +10V (or 12 to 20mA) at D and E causes a flow from P to A and B to T.

A negative command value 0 to -10V (or 12 to 4mA) at D and E causes a flow from P to B and A to T.

For valves only with one solenoid in side "A" (symbols EA and WA), a positive command value at D and E causes a flow from P to B and A to T.

Actual value:

A positive actual value 0 to +10V (or 12 to 20mA) at F and C causes a flow from P to A and B to T.

A negative actual value 0 to -10V (or 4 to 12mA) at F and C causes a flow from P to B and A to T.

For valves only with one solenoid in side "A" (symbols EA and WA), a positive actual value at F and C causes a flow from P to B and A to T.

Connecting cables:

Recommended:

Cable length up to 25m, model LiYCY 5x0.75mm²

Cable length up to 50m, model LiYCY 5x1.0mm²

The external diameter of the cable is 6.5 to 11mm

The connection of screen to PE on the supply side only.
